

11/13/6

4. What season do farmers plant pumpkins?

Answer = It's generally the first week of June. Depending on where you live in the U.S. you can plant between late May and late June.

5. Why do pumpkins have seeds in them?

Answer = Pumpkins have seeds in them because you can plant the seeds. To reproduce!

### Additional -

Pumpkins are believe to have originated in Central America. Seeds from related plants have been found in Mexico. Pumpkins should be planted in a sunny spot! The more sun the better!

They should be planted in the middle of hills. Did you know a single vine can be 30 ft. long.
