

Sunlight Zone

Part 2: Organisms (plants and animals)

Please do research on the different plants and animals that you may encounter in the zones that you travel through. You need visuals of the organisms and you should have detailed descriptions of them (think about the adaptations that they will need to survive). Remember- the more information you have the better! You will want to come up with at least three questions before you begin your research. You may write down information that you find that does not relate to your questions as you go along.

1. What types of fish live in the Sunlight Zone? Angelfish, Clown Fish, Cuttlefish, Jellyfish, Pufferfish, Starfish, Sunfish, Swordfish, and many more

2. How many organisms live in the Sunlight Zone?
About 100

3. What are the main types of plants in the Sunlight Zone?
Turtle grass, Mangrove, Eelgrass, Kelp, and coral
