

# Sunlight zone

We started off our awesome adventure in the sunlight zone, the warmest and the lightest zone off all. We took pictures of a stingray attacking its prey by shocking it with its tail, some jelly fish smoothly swimming through the water, and a shark swimming near a school of tuna. We saw plants like algae, seaweed, kelp and coral. We wanted to take some coral home but it is illegal to. It was really comfortable down there, and it was really cool. We predicted the sunlight zone would have the most organisms.
